WEEK 52: Dec 25 – Dec 31, 2022

January 6, 2023

## Overview

Influenza surveillance for Kane County Health Department includes the collection of data from hospital emergency rooms, laboratories, and public schools. Our participants have reported the following aggregate measures:

- Among five reporting hospital emergency rooms, 7.7% of visits were for influenza-like illness (ILI).<sup>1</sup>
- During Week 52, 4 labs reported that 77 of 873 (8.8%) specimens tested for influenza were positive.<sup>2</sup>
- The ILI absenteeism rate for public schools in Kane County was not calculated this week due to winter break
- As of the week ending December 31, there have been 34 influenza-related ICU admissions reported to the health department.
- To date, 2 outbreaks of influenza have been reported in Long-Term Care/Assisted Living facilities in Kane County.

<sup>1</sup>Influenza-like illness (ILI) is defined as fever > 100°F with cough or sore throat without other known cause

<sup>2</sup>Rapid influenza testing cannot distinguish influenza infections caused by novel influenza A viruses. The sensitivity of this type of testing has been shown to range between 20-100% for seasonal influenza viruses. A negative result does not exclude influenza virus infection.

\*All data are provisional

## Emergency Room Visits

During Week 52, 7.7% of reported hospital emergency room visits were for influenza-like illness (ILI).<sup>1</sup>

Each week, data for the 2022-23 season will be presented with data from the previous flu seasons to show the trend of ER visits for ILI over time.

Visits for influenza-like illness to reporting emergency rooms during Week 52 had the following age distribution:

- 0-4 years: 20.7% of all ILI visits
- 5-24 years: 24.0% of all ILI visits
- 25-64 years: 37.6% of all ILI visits
- 65+ years: 17.7% of all ILI visits

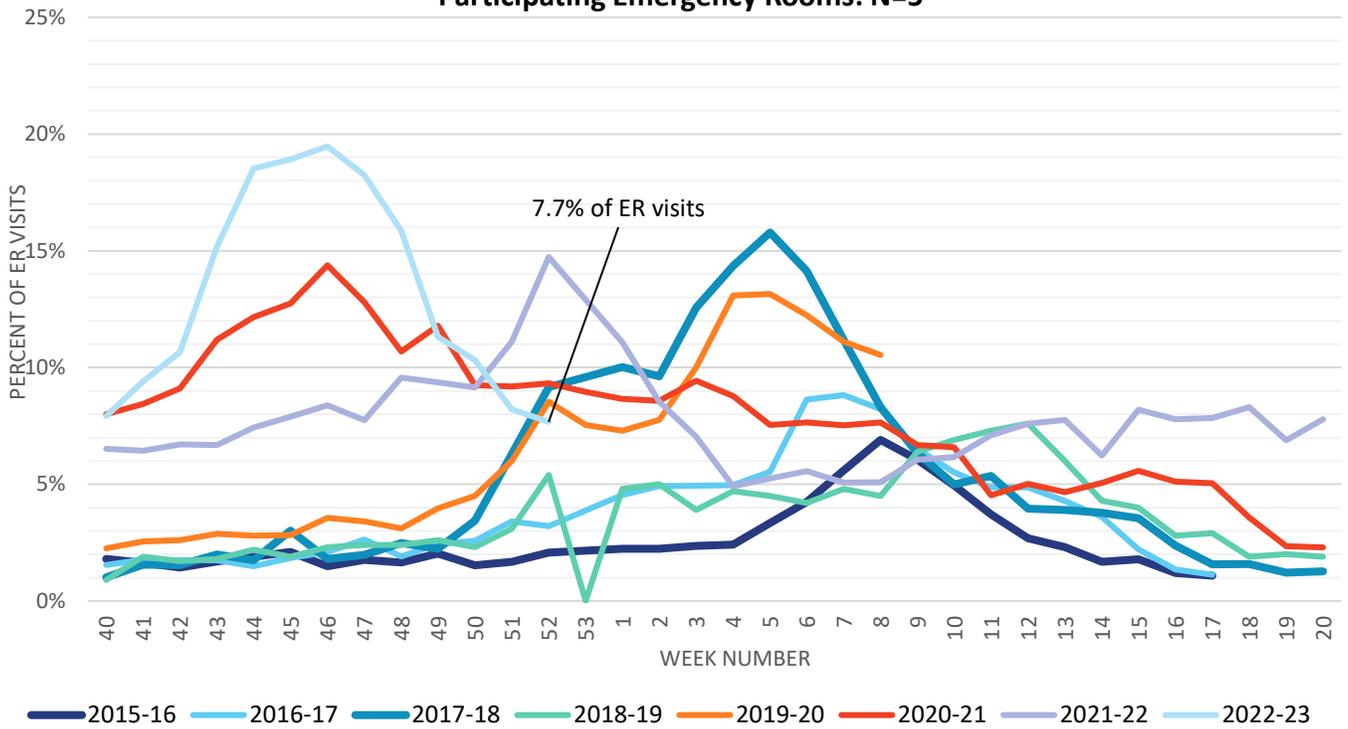

Throughout the season, KCHD will provide updated information on the total number of people visiting the emergency room for ILI, and what age groups make up those visits.

<sup>1</sup>Influenza-like illness (ILI) is defined as fever > 100°F with cough or sore throat without other known cause

\*All data are provisional

# Laboratory Tests

Kane County Labs (4)	Week: 52		Season Total	
	Number	Percent	Number	Percent
Specimens Tested	873		13,101	
Specimens Positive	77	8.8%	2889	22.1%
<b>Positive Specimens by Type</b>				
Influenza A	70	90.9%	2841	98.3%
Influenza B	7	9.1%	48	1.7%
Influenza AB	0	0.0%	0	0.0%
Unknown	0	0.0%	0	0.0%

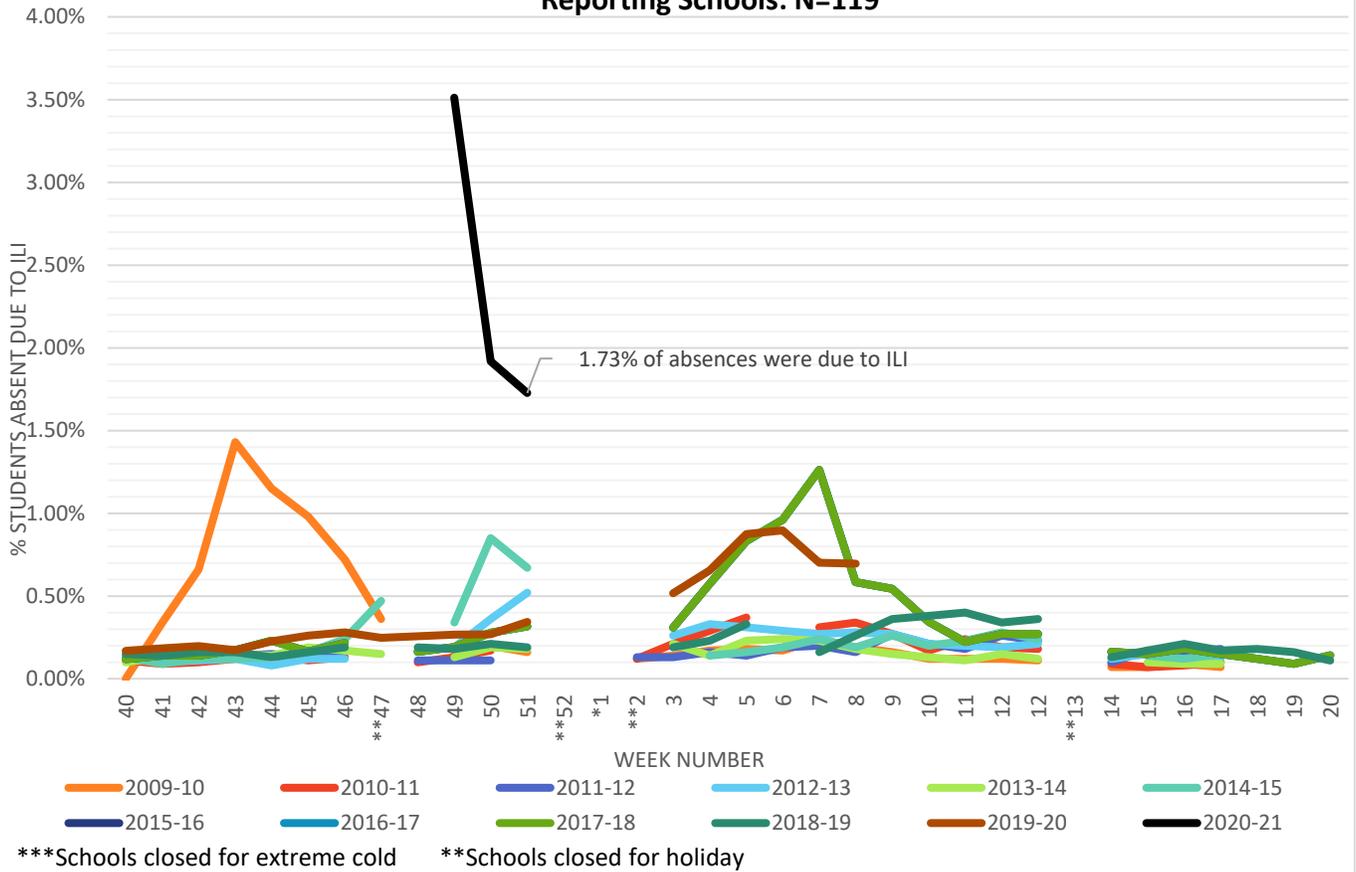

Rapid influenza testing cannot distinguish influenza infections caused by novel influenza A viruses. The sensitivity of this type of testing has been shown to range between 20-100% for seasonal influenza viruses. A negative result does not exclude influenza virus infection.

\*All data are provisional

# Student Absenteeism

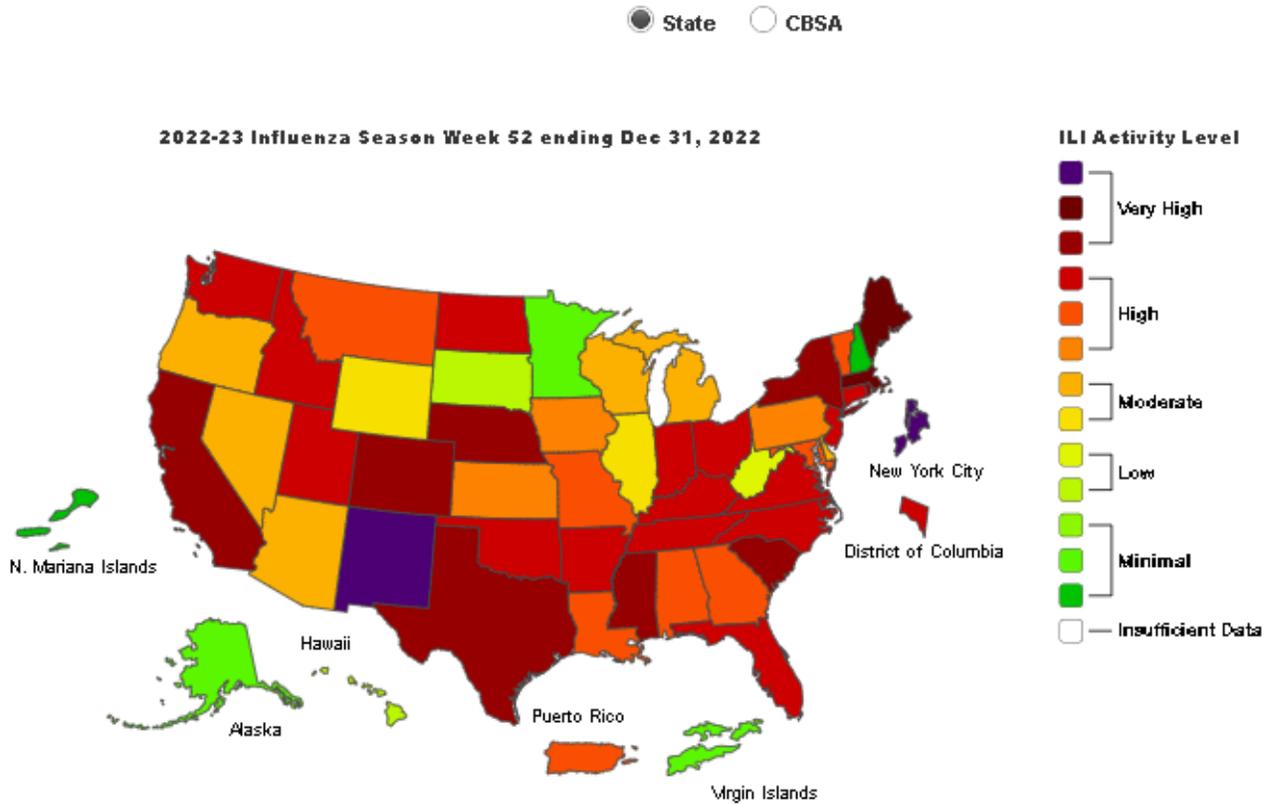

## Kane County Health Department Influenza-Like-Illness Surveillance:

Reporting Schools: N=119

Influenza-like illness (ILI) is defined as fever > 100°F with cough or sore throat without other known cause.

\*All data are provisional

<https://www.cdc.gov/flu/weekly/usmap.htm>

- No Activity:** No laboratory-confirmed cases of influenza and no reported increase in the number of cases of ILI.
- Sporadic:** Small numbers of laboratory-confirmed influenza cases or a single laboratory-confirmed influenza outbreak has been reported, but there is no increase in cases of ILI.
- Local:** Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in a single region of the state.
- Regional:** Outbreaks of influenza or increases in ILI and recent laboratory confirmed influenza in at least two but less than half the regions of the state with recent laboratory evidence of influenza in those regions.
- Widespread:** Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in at least half the regions of the state with recent laboratory evidence of influenza in the state.
